PERSONAL SUMMARY

Passionate about the realization and development of web projects, I naturally turned to a career as a web developer. Today I want to join a dynamic and young company.

Holder of a professional master's degree in web development, I have been practicing for seven years and I now know how to demonstrate a spirit of initiative and rigor. With my passion for this field, I am very invested in my work and I take great pleasure in exercising, so this enthusiasm is largely reflected in the quality of my work. As my professional career progressed, I had to work on a wide variety of projects which pushed me to learn and invest in areas that were not part of my professional training such as system administration (Ubuntu Server, Debian, CentOS or Windows Server), database administration (MySQL and PostgreSQL) and even image editing and computer graphics (Photoshop, Illustrator, After Effects) not to mention CMS (Joomla, Wordpress and Drupal).

If I get the opportunity to integrate a company, I will put my know-how into practice, as well as my good knowledge in Python, PHP, Java (JEE) and in some front-end frameworks such as Angular, ReactJS and VueJS. Hardworking, efficient, sociable, organized and endowed with an analytical mind, I will take care to assimilate the different needs of the company and will know how to integrate easily. Very comfortable in my job, I will be able to develop modern and trendy web applications as well as ensure their maintenance.

Believing that I possess the essential skills and qualities of a good web developer coupled with that of a system administrator and a webmaster (computer graphics also as an amateur), I am convinced that I will be able to properly complement any company team.

PERSONAL INFORMATION

Birth date: 25 November 1988

Nationality: Mauritania

Residence Country: Mauritania – Nouakchott

PREFERRED JOB

Preferred Job: Web Developer

Field: Information Technology

WORK EXPERIENCE

Total Years of Experience: 8 years, 1 month
